

## Measure skills that matter. Hire developers who outperform.

HackerEarth is a developer assessment platform that assesses a candidate's technical skills enabling enterprises to hire top developers.

## The platform at a glance

```

1  #include <iostream>
2
3  int fibonacci(int number) {
4      // Write your code here
5  }
6
7  int main(int argc, char *argv[]) {
8      int testcase_count, number;
9
10     std::cin >> count;
11
12     for(int i=0; i<count; i++) {
13         std::cin >> number;
14         std::cout << fibonacci(number) << std::endl;
15     }
16
17     return 0;
18 }

```

**Code Quality** 8/10

- Maintainability
- Reliability
- Security
- Cyclomatic complexity

Rank	Total Score	Attempted
2/60	182/200	29 of 30 questions

## How can HackerEarth help you?

Improve the screening of candidates using skill-based assessments

Save engineering hours dedicated to unnecessary interviews by shortlisting only top candidates

Enhance candidate experience and improve brand perception

## How does it work?

Create tests

Invite candidates

## Evaluate skills accurately

- Auto-generate accurate skill-based assessments
- Analyze a candidate's code in detail
- Vet a candidate's skills in real time

## Improve hiring efficiency

- Save time while identifying top talent
- Conduct assessments powered by deep analytics
- Make tech hiring a team sport

**12K+**  
questions

**38+**  
programming  
languages

**500+**  
developer  
skills

## Make your assessments developer-friendly

- Code better with the best IDE experience
- Bring the best out of your candidates
- Take assessments in different languages

## Enterprise-ready platform

- 99.95% uptime for higher scalability
- GDPR compliance, guaranteed
- Make hiring simpler with ATS integrations

## Numbers at a glance

**3 million** developers

**1,000+** customers worldwide

**18,000+** tests created

*"70% of the candidates that passed the assessments were hired."*
